Technical Support

## SCHREIBER IS THAT PARTNER

Together, our core group of skilled and experienced process engineers and our extended network of material suppliers and equipment manufacturers provide a complete solution set for designing and optimizing solids-liquid separation facilities. With decades of global, hands-on experience, we help our clients maximize plant productivity and process performance. Our proven solutions reduce installation and maintenance costs while improving overall process performance.

## EXPERT TESTING & OPERATING SUPPORT SERVICES

Schreiber process engineers provide a wide range of technical and operations support services to help your plant meet and exceed its production and financial objectives. Technical services include preliminary material testing, flow sheet development, equipment specification and chemical screening. Operations support services include both preventive and corrective measures to ensure optimum process performance. Our in-house operator training programs are customized to meet your specific needs.

## AVAILABLE BENCH FEASIBILITY TESTING

- Sample Characterization
- Chemical Screening/Optimization
- Clarification
- Dissolved Air Flotation
- Filtration

## TECHNICAL AND OPERATING SERVICES

- Laboratory Testing
- Bench & Pilot Testing
- Flow Sheet Development
- Chemical Screening/Optimization
- Process Start-up
- Process Troubleshooting
- Operator Training
- Equipment Commissioning

## SCHREIBER SERVICES & SUPPLIES

Schreiber's bench feasibility testing for solids-liquid and liquid-liquid separation is a critical component of many industrial production and environmental treatment operations. Simple in theory, but endlessly complex in day-to-day reality. Stable and efficient separation performance depends nearly as much on hard-earned empirical knowledge as on textbook design and operating procedure. For a plant owner trying to improve performance or reduce costs, no decision is more important than the choice of a seasoned partner with deep industry and process expertise.

## MARKETS SERVED

- Power Generation
- Pulp & paper
- Oil & Gas
- Chemical
- Food & Beverage
- Industrial Minerals
- Mining & Metals
- Municipal Water & Wastewater
- Industrial Wastewater
